

PHILHEALTH CIRCULAR

No. 2025-0027

**TO : ALL ACCREDITED HEALTH CARE PROVIDERS,
PHILHEALTH MEMBERS, PHILHEALTH REGIONAL
OFFICES AND ALL OTHERS CONCERNED**

**SUBJECT : Quality Standards on the Screening for Lung Cancer as
Reference of the Corporation**

I. RATIONALE

Republic Act No. 11223 (Universal Health Care Act) mandates PhilHealth to ensure the delivery of quality health services in accordance with evidence-based clinical practice guidelines endorsed by the Department of Health (DOH) and relevant specialty societies.

Quality-assured cancer screening is vital for early detection and timely intervention, leading to reduced disease burden and improved health outcomes. The establishment of uniform standards ensures consistent service delivery, strict adherence to recognized clinical guidelines, and protection against substandard or inappropriate practices, fulfilling PhilHealth's mandate to safeguard the health of all Filipinos.

Through this issuance, PhilHealth reaffirms its commitment to delivering high-quality, accessible, and patient-centered care, and thereby upholding its mandate to protect the health and well-being of every Filipino.

II. OBJECTIVES

This PhilHealth Circular aims to establish the minimum standards of care for lung cancer screening in alignment with the Corporation's Quality Assurance Program.

III. SCOPE

This PhilHealth Circular defines evidence-based parameters for eligibility assessment, risk stratification, and the delivery of lung cancer screening services aligned with nationally adopted guidelines and harmonized with international best practices.

DC: Hb apw Date: 11/26/25

This policy covers all PhilHealth-accredited health facilities possessing the capability and the appropriate Department of Health (DOH) license to provide the relevant imaging services. This shall apply to all Filipinos registered to their respective PhilHealth's Yaman ng Kalusugan Program (YAKAP) clinics for the covered outpatient benefits.

IV. DEFINITION OF TERMS

- A. Cancer Screening** – presumptive identification of unrecognized disease in an apparently healthy, asymptomatic, high-risk population by means of tests, examinations or other procedures that can be applied rapidly and easily to the target population.¹
- B. Detectable Pre-Clinical Stage** – the period during which an undiagnosed cancer can be detected through screening before any clinical symptoms appear.²
- C. Diagnostic Procedures** – medical tests performed to determine the underlying disease or condition based on a patient's signs and symptoms. These procedures also guide treatment planning, assess treatment effectiveness, and support prognosis. They may include laboratory examinations (e.g., blood and urine tests), imaging studies (e.g., mammography, computed tomography), endoscopic evaluations (e.g., colonoscopy, bronchoscopy), and tissue sampling through biopsy.³
- D. Eligibility Assessment** – an evaluation process used to determine whether an individual or entity meets the necessary criteria to be eligible for a particular benefit, service, or program.⁴
- E. Risk Factor** – anything that raises an individual's chances of getting a disease such as cancer.⁵
- F. Risk Stratification** – an approach clinicians use to make sure their patients get what they need in terms of care and to allocate limited resources to the patients who need them most.⁶

V. POLICY STATEMENTS

A. Eligibility Criteria

1. Lung cancer screening shall be provided to eligible, asymptomatic, high-risk individuals within defined target populations for cancers affecting the lungs (e.g. small cell lung cancer, non-small cell lung cancer) with a detectable preclinical stage, where early detection and timely treatment have been shown to improve health outcomes.
2. The target population for lung cancer screening is all asymptomatic adults 50 years old to 80 years old who have identified risk factors.
3. Identified risk factors refer to any of the following:
 - a. At least 30 pack years (pack years = number of cigarette packs per day x number of years smoked) who are currently smoking or have quit smoking within the past 15 years; or
 - b. A family history of lung cancer up to the first-degree relative in an individual with confirmed smoking history.

B. Conduct of Screening Process

1. PhilHealth accredited primary care physicians shall offer lung cancer screening as a preventive health service, guided by risk stratification. Screening shall utilize appropriate diagnostic procedures to detect cancer or precancerous conditions in asymptomatic individuals.
2. All eligible patients, as determined through a standardized eligibility assessment, shall undergo pre-screening counseling by qualified and PhilHealth-accredited healthcare providers to explain the purpose, benefits, risks, and limitation of the cancer screening tests. It should include informed consent as a prerequisite for service provision.
3. Screening shall be performed only for individuals meeting the clinical and eligibility criteria outlined in Section V.A. of this PhilHealth Circular.
4. The eligibility assessment by the accredited primary care physicians shall be documented, detailing relevant patient history, risk profile, and rationale.
5. Screening tests for lung cancer include the following:
 - a. Low-dose Chest Computed Tomography (LDCT):
 - a.1. LDCT is a specialized chest imaging procedure that uses substantially lower radiation than standard CT to generate high-resolution cross-sectional images of the lungs, enabling early detection of nodules or cancers before symptom onset.

a.2. LDCT shall be conducted every twelve months.

6. Lung cancer screening tests shall be performed exclusively by trained and credentialed personnel in health facilities licensed by the Department of Health and accredited by PhilHealth.
7. Test results shall be explained immediately to the patient, with proper interpretation including post-screening counseling.
8. Any abnormal screening result shall prompt timely referral to appropriate specialists for confirmatory diagnostic procedures or treatment services, in accordance with the primary care physician's established referral pathways. All referrals are to be documented.

C. Monitoring and Evaluation

1. The health care provider shall be bound by the provisions of the Performance Commitment and subject to the rules on monitoring and evaluation of performance as provided in PhilHealth Circular No. 2018-0019 Health Care Provider Performance Assessment System (HCPPAS) Revision 2.
2. Standards of care issued by authorized agencies/organizations shall be regularly monitored. As deemed necessary, a revision of this policy shall be made. Any updates resulting from the review shall be disseminated in another PhilHealth Circular.

VI. PENALTY CLAUSE

Any violation of this PhilHealth Circular shall be dealt with and penalized in accordance with pertinent provisions of R.A. No. 11223 and R.A. No. 10606 (National Health Insurance Act of 2013), and their respective Implementing Rules and Regulations.

VII. SEPARABILITY CLAUSE

In the event that any part or provision of this PhilHealth Circular is declared unauthorized or invalid by any Court of Law or competent authority, those provisions not affected by such declaration shall remain valid and effective.

VIII. REPEALING CLAUSE

This PhilHealth Circular repeals, amends, or modifies Annex A in PhilHealth Circular No. 2025-0014 PhilHealth Benefit Packages for Selected Outpatient Cancer Screening Tests that are contrary or inconsistent to its provisions.

IX. DATE OF EFFECTIVITY

This PhilHealth Circular shall take effect fifteen (15) days after its publication in the Official Gazette or in any newspaper of general circulation. Three (3) certified copies shall be deposited to the Office of the National Administrative Register (ONAR) at the University of the Philippines Law Center.
